

Assai Enterprise

Coordinated Action at Scale

Turn insight into execution. Manage readiness, workflows, and decisions in real time.

Assai Enterprise brings together the full Assai platform into one connected experience. It combines structured document control, engineering insight, and coordinated workflows across systems. Teams can monitor status, automate reporting, and act on real-time asset data in one unified operational layer.

What It Enables

Coordinate workflows across teams and systems to drive consistent decisions.

Monitor readiness, handovers, and compliance in real time.

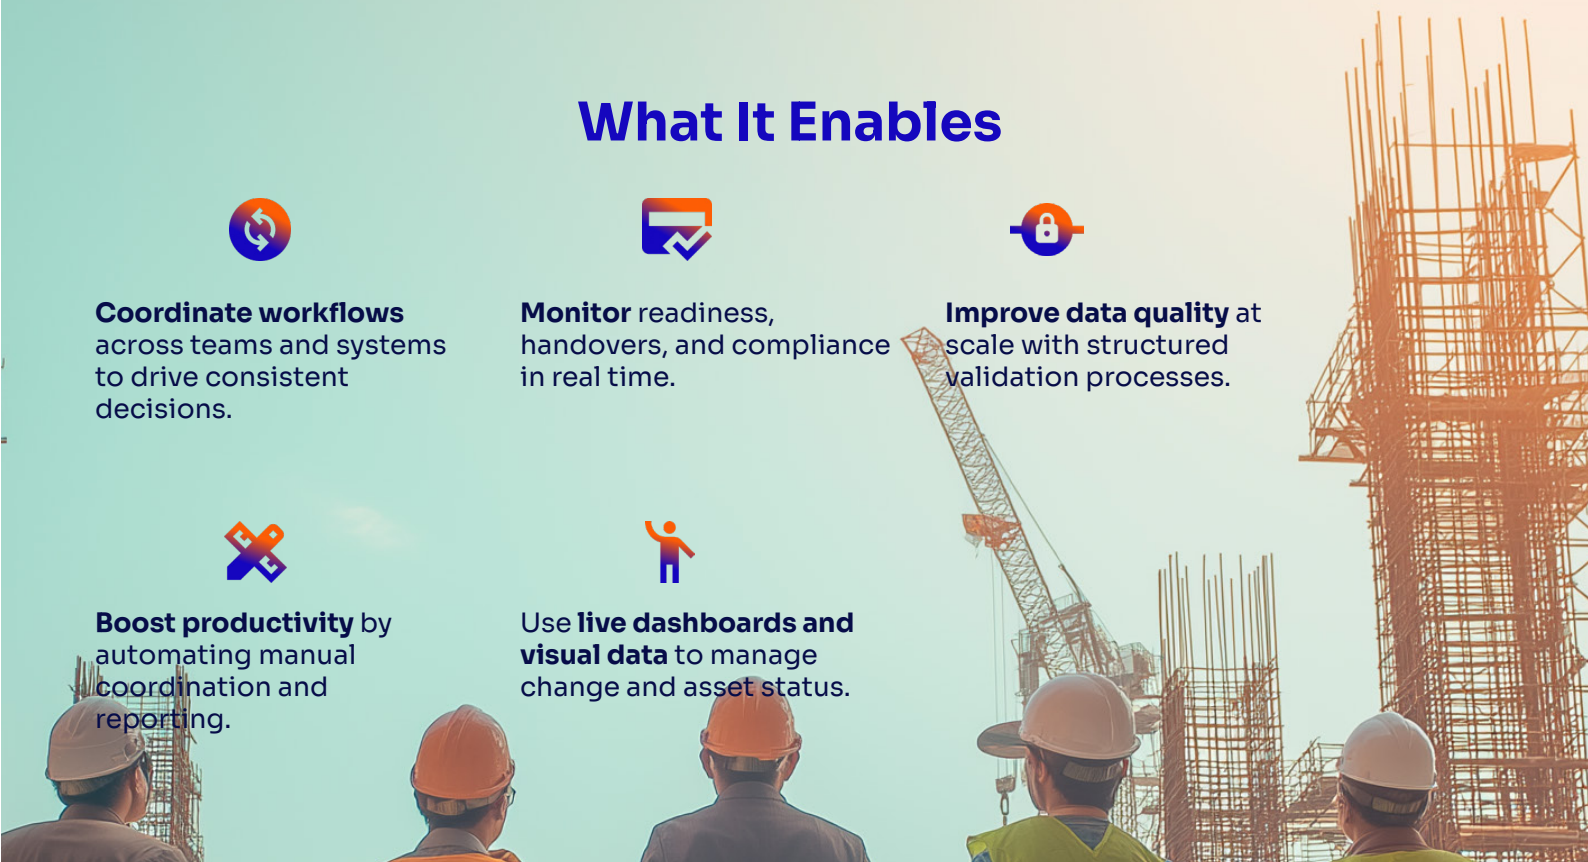

Improve data quality at scale with structured validation processes.

Boost productivity by automating manual coordination and reporting.

Use **live dashboards and visual data** to manage change and asset status.

Assai Viewport can be used on its own or as part of the Assai platform.

Clarity in Complexity

Integration

Built to orchestrate workflows and data across Assai DMS, Viewport, and a wide range of external systems including CMMS, ERP, tag registers, and file shares

Deployment

Web-based. SaaS preferred. On-prem available if required.

Where Assai fits in

A project owner monitors readiness across disciplines using live dashboards, catching blockers before they delay handover. [placeholder]

A team reconciles tag and asset data between CMMS and models, improving data quality before operational startup. [placeholder]

An operator automates compliance checks by triggering workflows based on live process values. [placeholder]
